Basic analysis

Regarding 10 RoHS regulated substances (cadmium, lead, mercury, hexavalent chromium, PBB, PBDE, DEHP, DBP, BBP, DIBP), please measure by referring to the recommended analysis method.

Perform fluorescent X-ray analysis on cadmium, lead, mercury, total chromium, and bromine.

For cadmium and lead, please submit the analysis data by ICP-AES (ICP-OES), ICP-MS, etc.

For mercury, total chromium, and bromine, if the X-ray fluorescence analysis results are below the quantitation limit, subsequent analysis is not necessary.

Note) Please be sure to submit the analysis data of X-ray fluorescence analysis, the ICP data of lead and cadmium, and the measurement results of phthalates as evidence of non-use guarantee.

Note) For application equipment, supplier evaluation is carried out once a year based on the "MS5-1811-001 Customer Periodic Evaluation Check Sheet (for labor saving)". Based on the evaluation result, 3B will instruct the evidence of the non-use guarantee from the supplier, either the non-use certificate, the material certificate, or the analysis result based on the basic analysis, so please submit it.

Decide whether to adopt the screening method or the verification method.

- Measurement by thermal decomposition method (Py-GC / MS) in screening method
- As a verification method, Soxhlet extraction-GC / MS method or reprecipitation-GC / MS method

When the screening method is adopted, it is judged based on the quantitative value whether inclusion or non-inclusion or reanalysis by the verification method is necessary. As for the judgment threshold value, it is judged that the quantitative value is 0.5 times the maximum allowable concentration, that is, 500 ppm, it is not contained, and the quantitative value is 1.5 times the maximum allowable concentration, that is, 1,500 ppm, that it is contained. On the other hand, if the concentration is between 500 and 1,000 ppm, the necessity of re-examination by the verification method is judged in consideration of the characteristics peculiar to the screening device. If it is 1,000ppm to 1,500ppm, re-inspect it by the verification method.
